
1 to 5

② Backend → processing (AI/Redis)

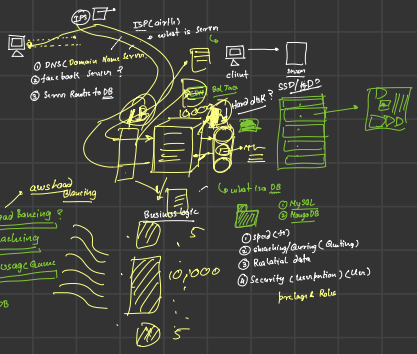
① Load on this client (frontend client) ?

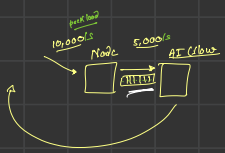
② Data → (Data intensive application)

③ Communication between DB & frontend

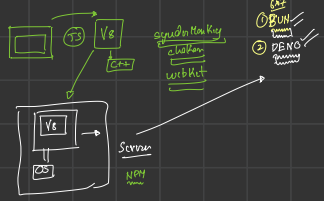
① Data Intensive applications — meeting the web

② Compute intensive applications — very small minority





What is Node ? → Runtime



why & when do we use node?

① JS

② Async & Really good for Data intensive application

③ Really fast to develop

& Not compute intensive applications

what are the alternatives to

① spring Boot — Java

② Django — Python

③ Rails — Ruby

framework

Nest

Express TS

framework V/s Library

Angular — framework calls You

React — You call library
